

DEVELOPING YOUR FUTURE

Adobe® LiveCycle® Enterprise Suite Product Overview (Lunch and Learn)

Adobe LiveCycle ES (Enterprise Suite) software is an integrated solution that blends electronic forms, process management, document security, and document generation to help you create and deliver rich and engaging applications. These solutions virtually eliminate physical paperwork, accelerate decision-making, and become an instrumental tool for achieving strategic corporate initiatives, including regulatory compliance adherence. LiveCycle ES accelerates the flow of business-critical information among employees, customers, suppliers, and business partners. This seminar provides an overview of LiveCycle ES and its undeniable value proposition. Gain insight into how LiveCycle ES extends corporate reach beyond historically impenetrable boundaries; pushing automation upstream and ensuring clean inbound data from the very first step within the most important business process, yours.

When most people hear the name Adobe, they think of Acrobat, Adobe Reader, or the Creative Suite (e.g. Photoshop, Illustrator, etc.), when in actuality Adobe offers much more. With Adobe LiveCycle ES, Adobe provides a collection of enterprise-strength solutions that effectively addresses common business pain points including:

- Capturing clean business data from internal employees and external customers at the point-of-entry with a rich user experience.
- Enforcing electronic document security beyond the corporate firewall to allow for safe and secure communication with employees, customers, suppliers and business partners alike.
- Automating the capture of inbound data without re-keying information that has been transmitted via industry-standard means, for example facsimile or snail mail.
- Dynamically building high volume business applications to interact with customer or business transaction data in an industry-standard and platform-independent manner.
- Automating form-based business processes in a quick and effective manner and providing internal and external customers the ability to initiate, service, and track business tasks.
- Request, capture, and store end-user acceptance, authorization, and acknowledgement through industry accepted and legally binding digital signatures within business documents.
- Provide document version management beyond current limitations of the electronic document management repository.
- Provide offline data entry and security for mission critical electronic business information.

Who should attend?

IT Managers, Business Domain Experts, System Architects, Business Analysts, Form Authors and Business Process Developers.
