

What is BusinessObjects? (Lunch and Learn)

BusinessObjects software provides performance management, planning, reporting, query and analysis capabilities as well as enterprise information management. This seminar introduces potential BusinessObjects users to the functionality and features of the suite of BusinessObjects software products.

Cardinal's clients have used the knowledge that they have gained from this seminar to address the following issues:

- Increase the accuracy of reporting
- Increase the capability of business users to perform advanced reporting tasks
- Improve business decisions through more thorough and timely analysis
