

## **.NET for Managers**

This seminar is designed to provide the principles of the .NET framework and development environment. Understanding the advantages of the .NET technology and gaining a practical understanding of .NET empowers managers to improve their technology decision-making and communication with development teams. This seminar will also discuss co existing .Net applications with pre-.NET solutions. Ultimately, managers are armed with the right knowledge to make informed decisions regarding future development endeavors.

Cardinal's clients have used the knowledge they have gained from this seminar to address the following issues:

- Utilize object-oriented programming strategies to help reduce programming and debugging errors
- Solve architectural issues that can be common to large scale .NET applications
- Improve productivity by becoming more familiar with the .NET Development and Deployment Tools
